2. **Program Version (from Help menu, About):**

   Version 3.0, Revision 3.0.10, Build 1.5.02.0010

3. **Windows XP Professional Edition, Service Pack 2**

4. **Problem Description**

   Reservoir editor, IF_Block Conditional Test editor: Move Up and Move Down buttons generate error messages in the console log.

I was creating a complex conditional statement for an If-block in my operation set. I added several condition lines (which appended to the bottom). I wanted them elsewhere so I clicked on the Move Up button. Nothing happened. So I tried the Move Down button on an existing line. Still nothing happened. I checked the Console log from the Tools menu from the main display area (map window) and found the following error messages:

> Error finding method moveUp in class hec.rss.client.ConditionalPanel
> Error finding method moveDown in class hec.rss.client.ConditionalPanel

5. Steps to Reproduce

1) Add an IF_Block.
2) Add conditional lines.
3) Try moving lines up and/or down using the buttons.
4) Check the console log.

6. The Watershed

I have replicated this behavior in other watersheds so it is not unique to the data/model.
