Introduction to Block Maxima

Flood Frequency Analysis PROSPECT May 2022

Gregory S. Karlovits, P.E., PH, CFM Statistical Hydrologist US Army Corps of Engineers Hydrologic Engineering Center

Purpose

• Understand a fundamental technique in statistical hydrology

Outline

- 1. Block maxima
- 2. Annual maximum series

Block Maxima

Block Maxima

- Break a sample into equal sized parts
 - Parts can't overlap
- Take the largest observation from each part

| Block | Maximum Value |
|-------|------------------|
| 1 | 117.7 |
| 2 | 110.9 |
| 3 | 112.2 |
| 4 | 115.9 |
| 5 | 107.3 |
| 6 | 122.5 |

Why?

- Helps with the "IID" assumption
 - Observations are:
 - Independent
 - Identically-distributed
- Lets us look at behavior of large observations (i.e. floods)
- The math is "friendly"

Example

Kindergartners

| Class 1 | Class 2 | Class 3 |
|---------|---------|---------|
| Class 4 | Class 5 | Class 6 |

US Army Corps of Engineers® Each kindergartner has a height of N(42.8, 1.76) inches 20 children / class Children are randomly assigned to a class

Example

| Class | Max Height (in) |
|-------|-----------------|
| 1 | 47.5 |
| 2 | 46.2 |
| 3 | 46.6 |
| 4 | 45.7 |
| 5 | 45.9 |
| 6 | 46.2 |

Time Series Block Maxima

- Selected block size is a unit of time
- Blocks should be **homogeneous**
 - Make sure the largest value in each block means the same thing
 - If your process repeats with a regular cycle length, use that as the block size

Annual Maximum Series

Annual Maximum Series

- Block maxima where the groups are years
 - Water year
 - Calendar year
- Collect up the maxima and analyze them
- 1 observation per year

Water Year

- Split the year during the driest part
- Make sure one flood event doesn't create maximum in two years
- October 1st is the traditional break point
- Check your flow record!

Year-Over-Year Plot

Water Year

| | 45 | 15 Jun 1947 | 24:00 | 53,300 | | | | |
| | 46 | 20 Mar 1948 | 24:00 | 32,500 | | | | |
| | 47 | 08 Mar 1949 | 24:00 | 28,500 | | | | |
| | 48 | 11 Mar 1950 | 24:00 | 32,400 | Y | | | |

Limitations

- Non-maximum events in a year can be larger than annual maxima
- Some small annual maximum events will not be floods
