HEC-FDA
Version 1.2.5, October 2010
Release Notes

Since the last release of the HEC-FDA software (Version 1.2.5, March 2010) during the certification process, an error in the smoothing of standard deviation of error in the order statistics affected some data sets. In Version 1.2.5 (October 2010) this has been corrected.

Installation

The previous version of HEC-FDA installed to the following directory: ***C:\Program Files\HEC\HEC-FDA\1.2.5***. Version 1.2.5 (October 2010) HEC-FDA installs to the following directory: ***C:\Program Files\HEC\HEC-FDA\1.2.5a***. The sample data sets also get copied to this directory, sub-folder - ***Example Studies***. When you open a study in HEC-FDA it does not default to this directory so to use the sample data set you will have to browse to the correct location. When you are creating your own studies, you will need to create the studies in a different directory since most users do not have permission to write in the ***Program Files*** area.

Modifications

1. There was an error in smoothing the standard deviation of error in the order statistics that affects some data sets.

2. The computation of long term risk was changed from 25 years to 30 years (the GUI indicated that it was 30 years but the computation had not been changed).
